Client: Kronospan HPL sp. z o.o.
ul. Wojska Polskiego 3, 39-300 Mielec, Poland

Product: Interior compact laminate CGS according to EN 438

Order: Determination of the antibacterial properties of surfaces

Test engineer: Dipl.-Biol. Katharina Plaschkies

Test standard: Measurement of antibacterial activity on plastics and other non-porous surfaces

Inoculum: 500,000 CFU/ml

Incubation: 24 hours at 36 °C

Reference material: Polyethylene film

Test area: 40 mm × 40 mm

Test report: no. 2220029-A1 (16/07/2020)

Results:

**Decimal logarithm of the number of viable bacteria
after the incubation time of 24 hours [CFU/cm²]**

	<i>Staphylococcus aureus</i> DSM 799	<i>Escherichia coli</i> DSM 1576
Reference material	U _{T_Sa} = 3.3	U _{T_Ec} = 3.2
Test product	A _{T_Sa} < 1.1	A _{T_Ec} = 1.8
Antibacterial activity*: R = U – A		
Test product	R_{Sa} > 2.2	R_{Ec} = 1.4

*) A clear antibacterial activity is given if $R \geq 1.0$ at both bacteria strains.

The test product is classified as “antibacterial”.
